

# Introduction to

January 23, 2017  
Bernardo Najlis

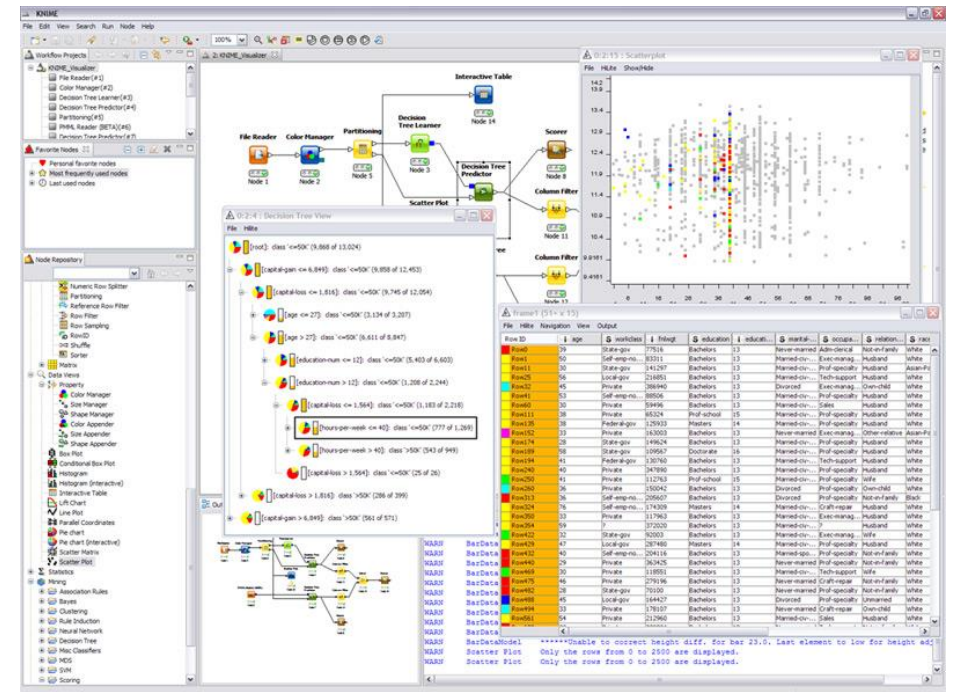

# Agenda

- What is Knime
- Where to get it and online resources
- What can I do with Knime
- How does it compare with similar tools
- Knime Lingo
- Knime Workbench
- How to build a Workflow
- Samples and Questions

# What is KNIME?

- KNIME stands for Konstanz Information Miner
- It is an Open Source Data Analytics, Reporting and Integration platform
- Use a GUI to assembly 'nodes' for data preprocessing (ETL), modelling and data analysis and visualization
- Modules for:
  - Data Mining
  - Data Analysis
  - Data Manipulation
  - More modules and extensions can be added!
- Written in Java and based on Eclipse

# ? Where to get it and other online resources

- <http://knime.org/downloads/overview>
  - Skip the registration form, go straight to step (2) and download the version **with all free extensions (~2Gb)**

- **Community Forum and Online Self Training**

- **Books**

**KNIME Essentials**

**By:** Gábor Bakos

**Publisher:** Packt Publishing

**Pub. Date:** October 16, 2013

**Print ISBN-13:** 978-1-84969-921-1

**Web ISBN-13:** 978-1-84969-922-8

**Pages in Print Edition:** 148

- **Videos**

[Introduction to Data Analytics with KNIME](#)

**By:** Rosaria Silipo

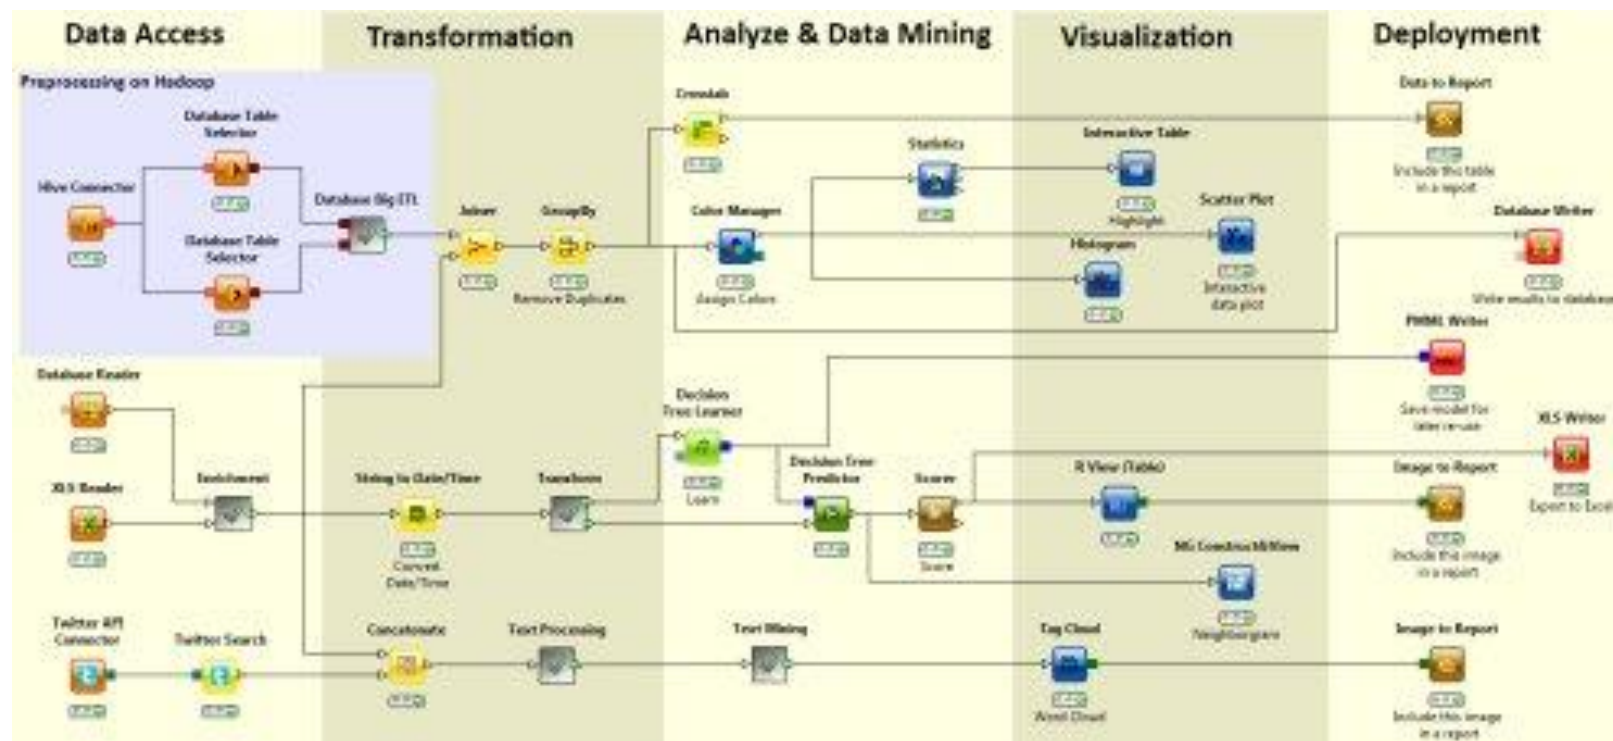

**Publisher:** Infinite Skills

**Publication Date:** 20-SEP-2016

**Insert Date:** 26-SEP-2016

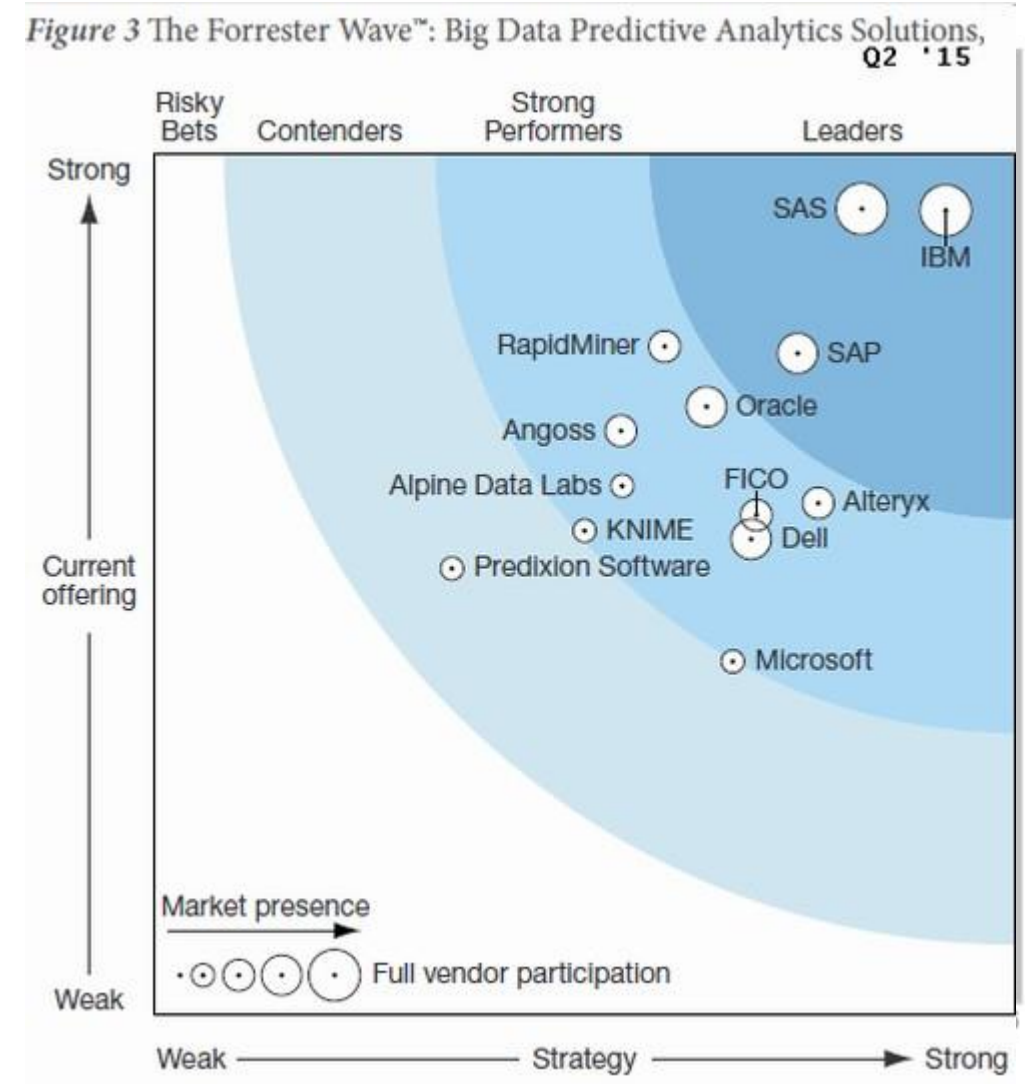

# ? What can I do with Knime?

- Data Access
  - File
  - Database I/O
- Transformation
  - Filtering, Grouping, Joining
- Analyze and Data mining
  - Weka
  - R
  - Python
  - Matlab
- Visualization
  - Different types of charts
- Deployment
  - Text mining

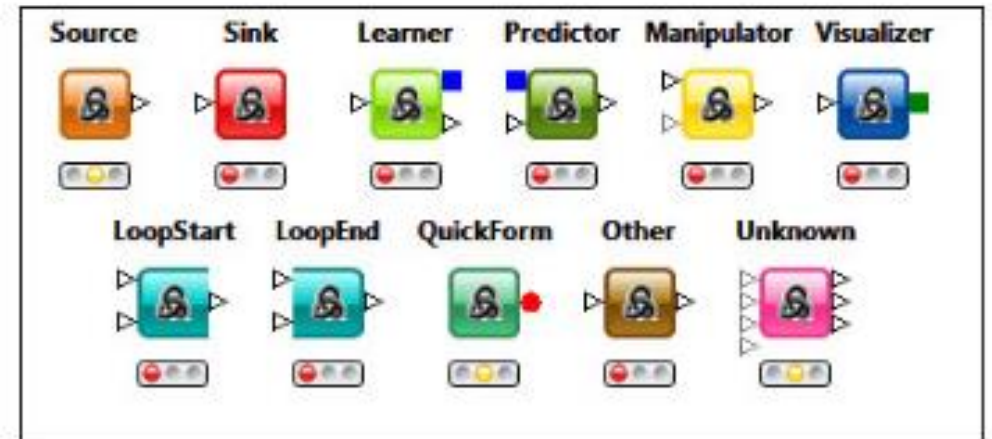

# ? How does Knime compare with others?

- Gartner's Magic Quadrant for Advance Analytics Platforms
- Leaders quadrant in 2016 with SAS, IBM and Dell
- Strong Performer / Contender in Forrester's Wave

# Knime Lingo

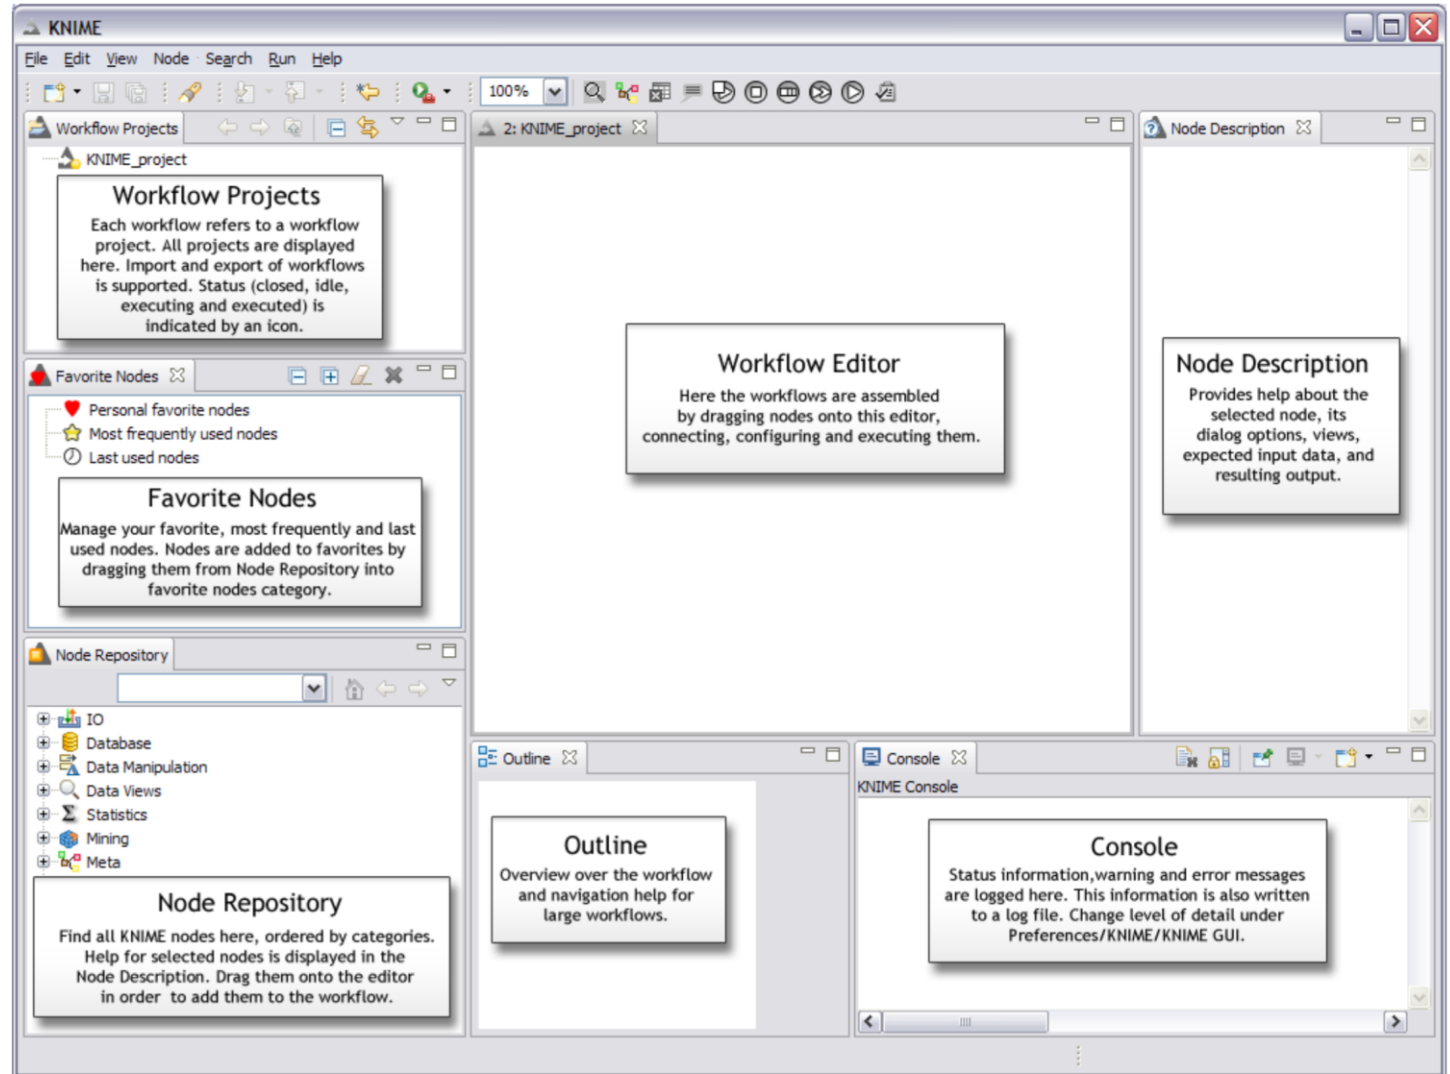

- Store your work in a **workspace**
- **Workspace** can contain **workflow groups** built using the **workflow editor**
- **Workflows** can contain **nodes**, **meta nodes**, **connections**, **workflow variables**, **workflow credentials** and **annotations**
- Each **node** has a type, which identifies the algorithm associated with it
- **Nodes** have **parameters**, **inports** and **outports**, and can have any of these states:
  - Misconfigured
  - Configured
  - Queued for Execution
  - Running
  - Executed

# Knime Workbench

- Workflow Projects
- Favorite Nodes
- Node Repository
- Workflow Editor
- Outline
- Node Description
- Console

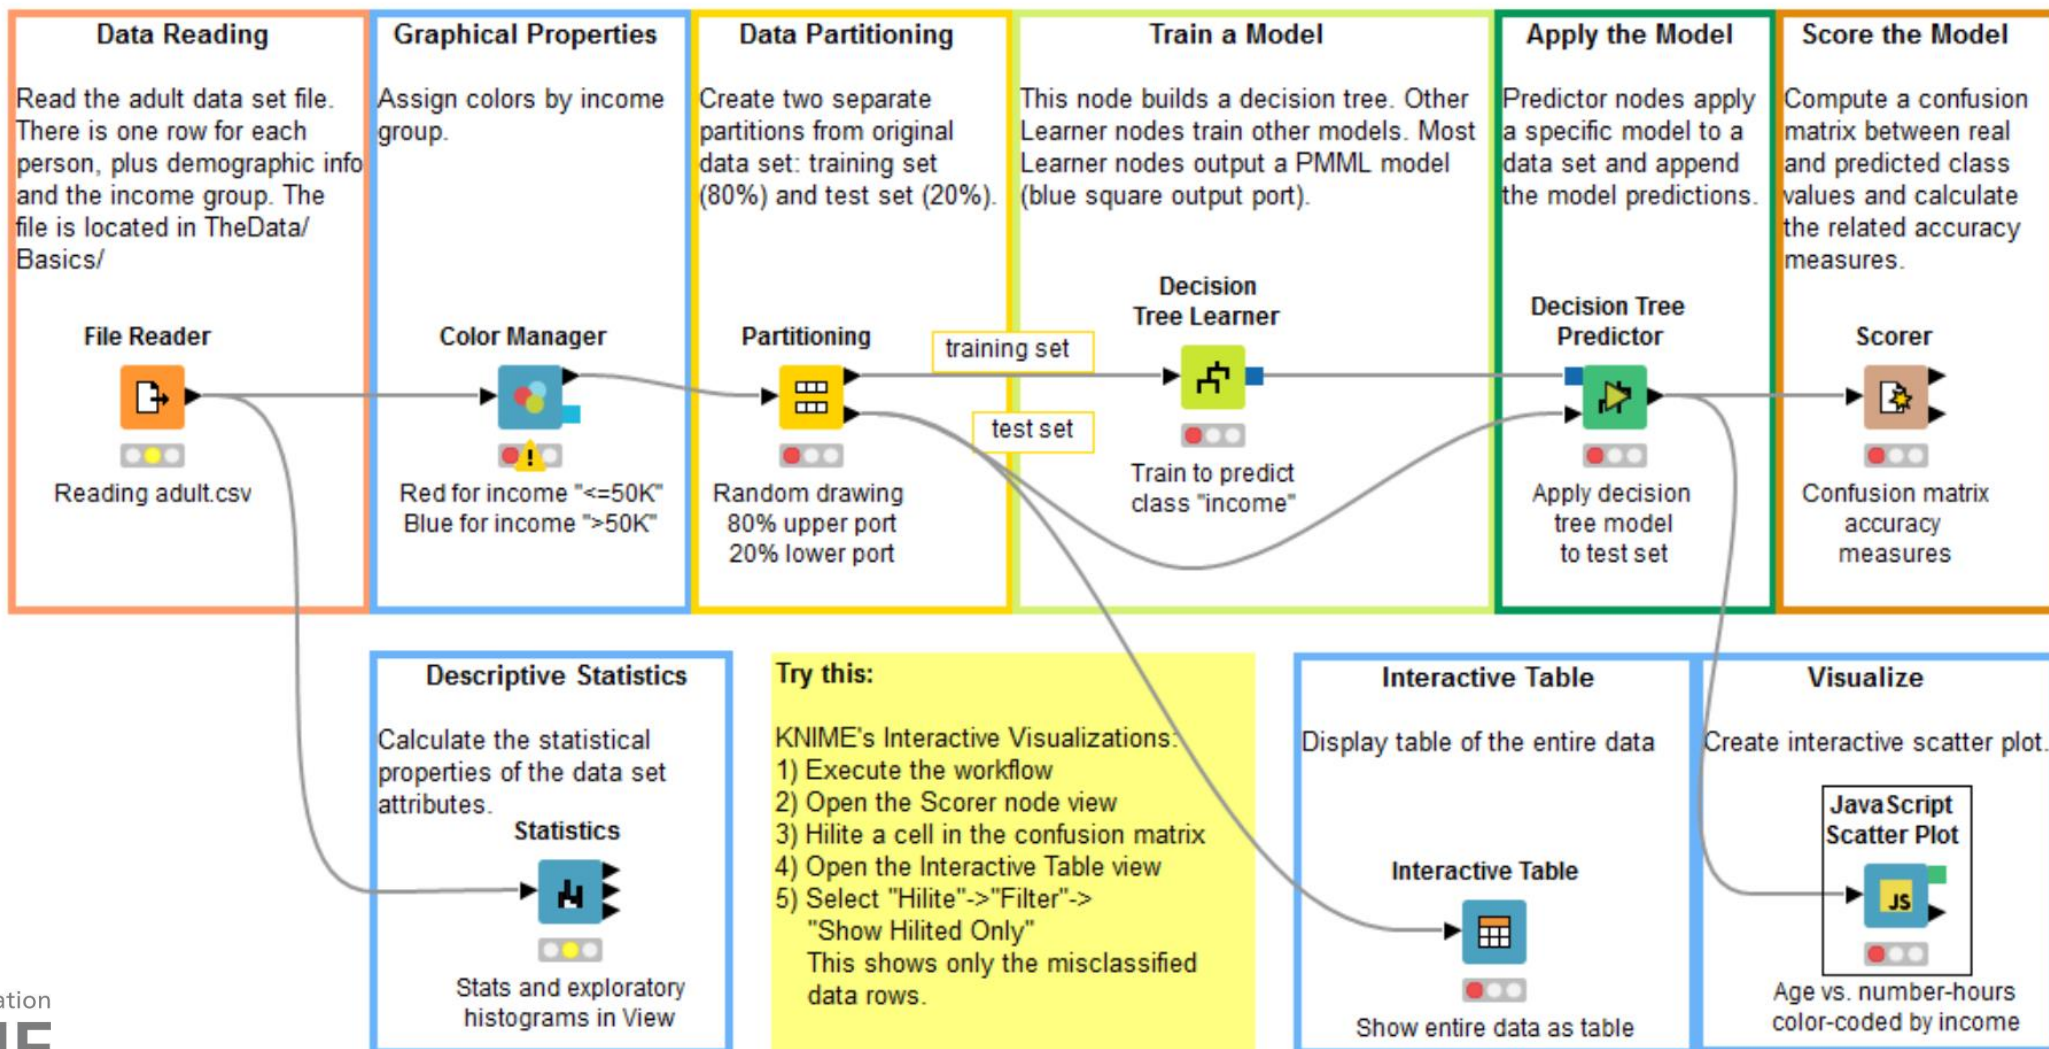

# How to Build a Knime Workflow

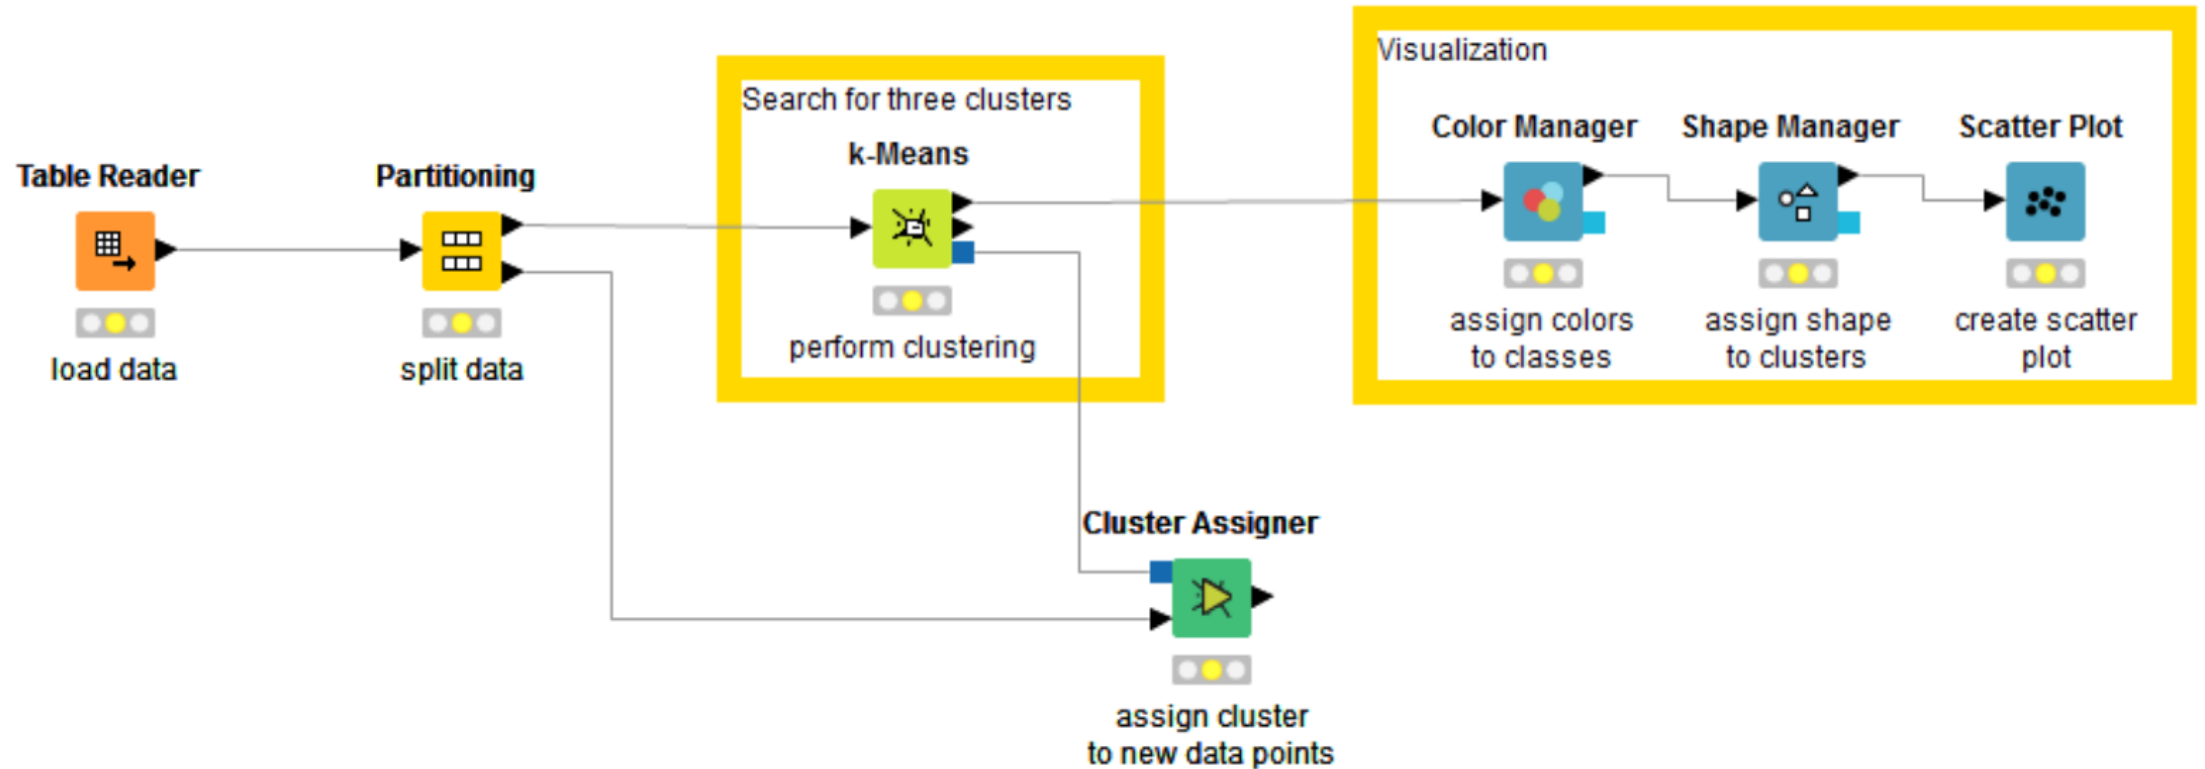

- Search in Node Repository
- Dragging nodes into Workflow Editor
- Connecting Nodes
- Configuring Nodes
- Executing (per node or one-shot)

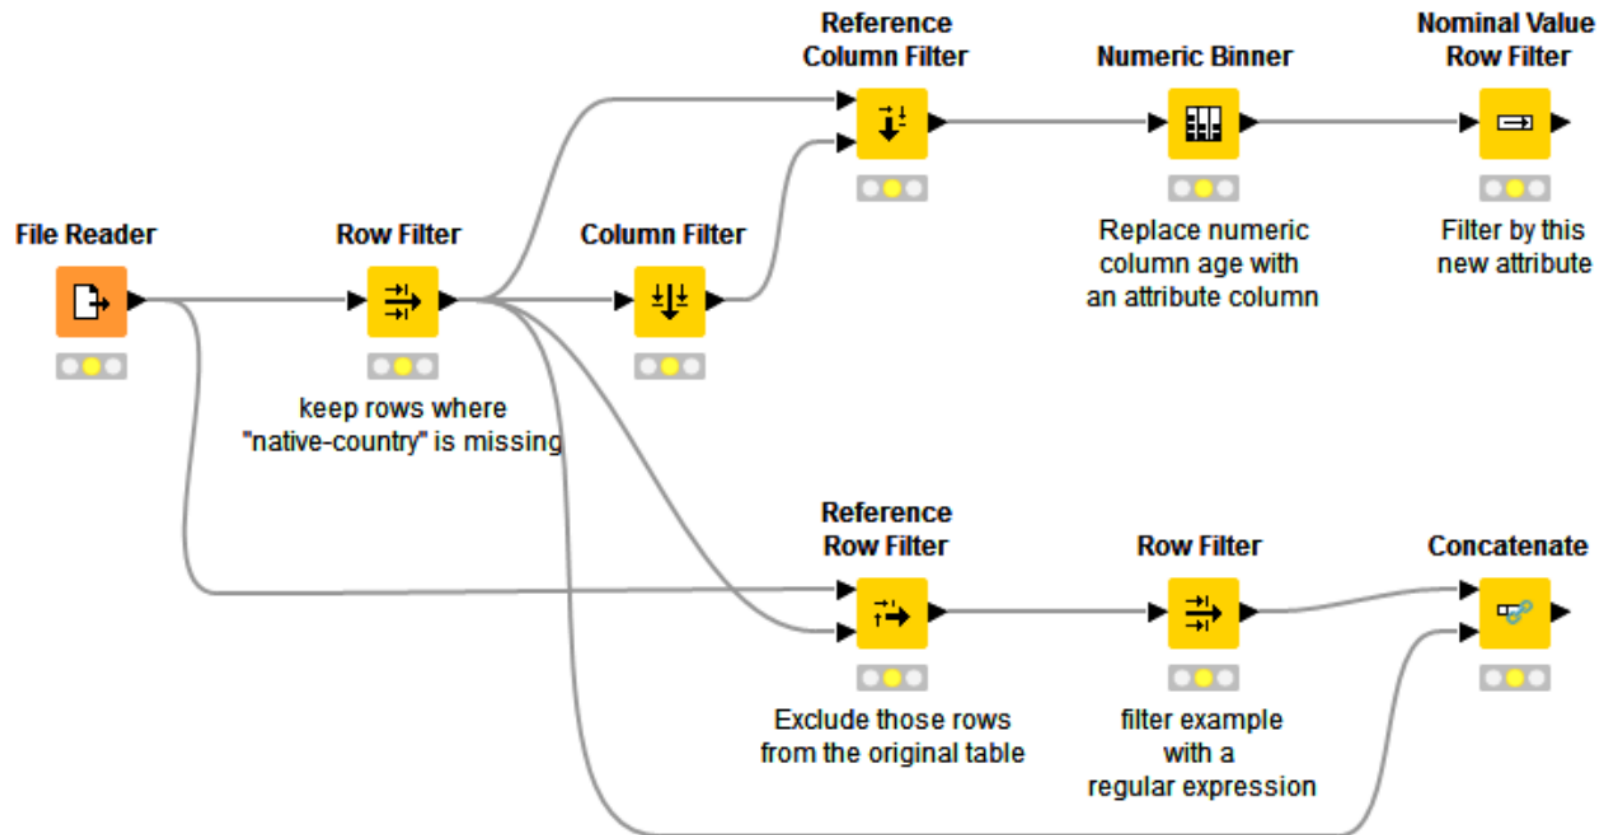

# Simple Model Training for Classification

# Performing k-means Clustering

# Example for Data Preprocessing

# Example of R Snippet
